

Mounting & Assembly

Customize your Box

Article:	Mounting - Customize your enclosure
Brand:	Multi-Box

Description

Mounting - Customize your plastic enclosure. Our standard enclosures include a seamless polyurethane foam gasket. When special temperature or chemical resistance is required, we install silicone seals. To reduce the penetration of electromagnetic waves, we can equip our enclosures with EMC gaskets.

If necessary, we test the entire product in our internal laboratory. According to your specification, we test the IP protection class (water and dust), corrosion resistance or carry out impact tests. Together we play it safe!

Take advantage of our large range of accessories and leave the entire assembly and equipment of your cabinets to us.

We install the following components

- Terminal Blocks
- Cable entry systems
- Membrane keyboards and decorative foils
- Pressure compensation element
- Threaded bushings
- Threaded bushings
- Gaskets
- Battery compartment
- DIN rails
- Mounting plates
- Connections
- Distance bolts
- Earthing contacts
- Fixing of windows and screens
- Tested assembly of included components
- Additional attachment options according to your specification
- Assembly and installation of specified cable systems
