

## Ventilation plugs | Stainless steel

Pressure equalization units | AISI303 | IP68

Article:	Ventilation plugs   Stainless steel
Brand:	Bimed
Ventilation plug material	Stainless steel (1.4305/303)
Ventilation membrane material:	Acrylic copolymer on nylon support
Protection class:	IP68   IP67
O-ring material:	NBR
Operating temperature:	Permanent -40 °C to +100 °C
Thread type:	Metric
Certificate:	UL 4X

### Description

Our Stainless Steel Ventilation Plugs are designed to meet the toughest industrial challenges. These robust plugs offer outstanding performance and reliability in demanding applications. Our Stainless Steel Ventilation Plugs are the ideal choice for industrial standard applications that require reliable performance in challenging environments. These plugs ensure optimal ventilation and protection for your sensitive components, extending the life of your equipment and minimizing maintenance needs. Upgrade your industrial applications with our Stainless Steel Ventilation Plugs – the perfect solution for demanding environments where reliability is essential.

- For standard industrial applications in harsh environments.
- Membrane properties: hydrophobic, oleophobic.
- Balances pressure differences between inner housing and the outside environment.
- Prevents damages according to pressure differences
- Prevents the formation of water condensation in tightly-sealed standard housings.

## Article number

Art.No	Description	Size	Average Air Flow for P = 70 mbar/1 psi (l/h)	Water Intrusion Pressure	Thread length mm	Total height mm
