

PTC Heater | SL

Cabinet heater with fan heater | 230W - 650W | 115V & 230V

Article:	SL
Brand:	Rubsamen & Herr
Voltage:	115V & 230V
Effect:	250W - 650W
Connection:	Terminal
Color:	Black

Description

PTC Heaters / SL includes four types of Cabinet Heaters with capacities: 250, 350, 500 and 650W at 20 ° C. They are designed to fit in the same compact housing. This facilitates cabinet design and makes it easy to expand capacity. The robust, high-temperature resistant housing measures only 86 mm x 100 mm x 105 mm. Our PTC Heaters are equipped with two individual heating circuits and a strong heating fan to ensure the optimum temperature in the electrical cabinet. and to also minimize moisture formation.

All models are calibrated for optimal performance at 20°C, ensuring consistent and reliable heating under varying conditions. The element has an integrated temperature guard that shuts off in the event of fan failure and to prevent overheating.

- Various heating capacities ranging from 250 – 650 W in the same housing
- 2 heating circuits with different circuit configurations
- Fan and heater are separately connected
- Integrated temperature limiter to shutdown if the fan fails
- Compact design, low weight
- Eyelets for screw mounting and clamp for fixing on mounting rail
- Connection by spring terminals
- Cover for the terminals
- Strain relief for cable
- Various controllers for temperature and humidity for external control are available as accessory
- Output capacity at 20°: See capacity
